

What is a Carbon Offset?

A carbon offset is a unit of carbon dioxide (CO₂) that is reduced, avoided, or sequestered to compensate for emissions occurring elsewhere. This also includes a variety of other air pollutants.

What We Do

Trees, Water & People is Positive Legacy's Carbon Offset partner for all Cloud 9 Adventures. We work to offset the emissions from Cloud 9 cruise events (air travel and fuel burned by ship) and the land events (air travel and resort carbon footprint).

Why Offset with TWP?

Travel and events produce extra CO₂ and other emissions that disproportionately affect many of the poorest countries. With your donation, TWP will offset this additional CO₂ while also helping impoverished communities.

How We Work

TWP manages reforestation, renewable energy, and environmental education programs in Central America and U.S. Tribal Lands using a community-based approach that helps local people move out of poverty.

Reforestation

Each Avocado tree being planted in this photo will sequester at least **ONE TON of CO₂**, and will also:

- Produce thousands of calories for hungry families
- Stabilize soil and prevent erosion and mudslides
- Generate income for people who sell avocados
- Provide shade, habitat and canopy cover

*We plant 28 different species of trees that sequester CO₂

Clean Cookstoves

Each efficient cookstove installed will prevent up to **10 TONS of CO₂** emissions during its useful life, and will also:

- Prevent women and children from breathing in the equivalent of two packs worth of cigarette smoke per day
- Prevent lethal burns experienced by kids falling into open fires
- Will reduce the amount of time women and children collect firewood by half

How much does it cost?

\$20

2.0 tons CO₂

Our 10 Year Impact	PositiveLegacyDonations:	\$78,118
	EventGuestDonations:	\$45,317
	Trees planted:	33,889
	Stoves built:	428
	Tons CO ₂ Offset:	12,361
That's the equivalent of taking 2,630 cars off the road for a full year (4.7 tons per car, per year)!
